

HLUMELO MTAMO

Junior Web Developer

Cape Town, Western Cape, South Africa | 078 758 9120 | mtamobrand@gmail.com

PROFILE

Self-taught, hands-on web developer with practical experience designing and building full production websites and web systems, including client-facing sites, e-commerce payment integrations, and a WhatsApp-integrated municipal complaint management system. Comfortable working across the full stack — from front-end interfaces to backend logic, database integration, and third-party API integration — with a strong pattern of independently diagnosing and resolving real production issues. Seeking a junior web developer role to grow within a team environment.

SKILLS

Front-End: HTML5, CSS3, JavaScript, React

Back-End: Node.js, PHP, Python

Data & Integrations: Supabase, Paystack & PayFast payment integration, WhatsApp API integration, webhook handling & HMAC verification

Practices: Client-driven iterative development, debugging & bug diagnosis across the full stack, admin dashboard build-outs

PROJECTS

Municipal Complaint Management System | *WhatsApp-integrated — built for Breede Valley Municipality*

- Developing a WhatsApp-integrated complaint management system for a municipal client, from backend logic through to client-facing sales materials.
- Finalising the production backend and building a browser-based interactive demo prototype.
- Prepared client-facing deliverables including a proposal document, mutual NDA, and pitch deck as part of the sales engagement.

Tussen Dorings Website | *Full-stack build for a non-profit community organisation*

- Built a full multi-file website for a Worcester-based non-profit, including a YouTube video content grid and event registration system with distance-based tiers and add-ons.
- Integrated a Supabase database and a full Paystack payment backend, including PHP payment initialisation, webhook handling, and HMAC signature verification.
- Migrated the payment backend from PayFast to Paystack after diagnosing persistent webhook issues, and built an admin dashboard for the organisation.
- Independently diagnosed and resolved multiple production bugs, including an API key error, incorrect fetch targets, database permission issues, and duplicate-record update logic.

Invincible Tech Business Website | *Company site design & rebuild*

- Designed and built the business presence website, including a hero section, services/expertise grid, and a skills-and-capabilities showcase.
- Iterated the site's visual direction from a dark premium aesthetic to a light, corporate look, and added a live WhatsApp demo to the hero section.
- Earlier version included a Supabase-integrated consultation form and tiered pricing structure.

Petal & Polish | *Client website — nail technician services*

- Built a single-file HTML website for a nail technician client, refining the design across multiple aesthetic directions based on client feedback.

EDUCATION

Self-Taught Web Development

Built practical, production-level skills in front-end, back-end, and third-party API integration through independent, hands-on project work.
